

MERIEM BENDJOUDI

Full-Stack Software Engineer - Python / React / Vue.js

Algiers, Algeria | +213 557 399 140 | bendjoudimer@gmail.com | linkedin.com/in/bendjoudi-meriem

CORE SKILLS

- **Backend:** Python (Flask, FastAPI), JavaScript, REST APIs, SQLAlchemy, OOP & software architecture, design patterns
- **Frontend:** React.js, Vue.js, HTML5, CSS3, responsive UI development
- **Databases:** MySQL, PostgreSQL, SQLite - schema design, query optimization, relational modeling
- **Security:** JWT Authentication, Role-Based Access Control (RBAC), AES encryption
- **Testing & Quality:** Unit & functional testing, UAT supervision, regression testing, bug triage & root cause analysis
- **DevOps:** Docker, Docker Compose, Nginx, Linux, Git, CI/CD basics, AWS (basic)
- **Ways of Working:** Agile/Scrum, code review, technical mentoring, sprint planning

PROFESSIONAL EXPERIENCE

Software Engineer / IT Team Lead

2022 - Present

Systhen Algérie - Algiers, Algeria

- Designed and built scalable Python (Flask, FastAPI) backend services for high-volume document processing platforms, consumed by React.js and Vue.js frontends.
- Delivered 4+ production applications end-to-end: requirements, architecture, implementation, testing, and deployment.
- Implemented secure authentication and authorization (JWT, RBAC) and AES encryption for sensitive data.
- Built OCR- and barcode-based document processing pipelines (Tesseract, Pyzbar, PyTWAIN), cutting manual processing time by up to 60%.
- Implemented Elasticsearch for full-text indexing and search across large document repositories.
- Deployed and maintained containerized applications (Docker, Nginx) on Linux servers.
- Since 2025: lead technical delivery for a 4-6 engineer team - code review, sprint planning, and mentoring - while remaining hands-on in the codebase.
- Delivered platforms used by students, teachers, researchers, and administrative staff across public institutions, including Algeria's National Library and multiple universities.

KEY PROJECTS

Document Scanning & OCR Platform (2024)

- Python, Flask, PyTWAIN, Tesseract OCR, Pyzbar, Vue.js - modular scanning app with scanner control, OCR extraction, and barcode decoding; tuned an object-detection model on custom barcode datasets to improve accuracy.

Enterprise Document Management Platform - GED/ECM (2022 - 2026)

- Python, DocumentHub, MySQL, Elasticsearch - designed and integrated a GED/ECM document management platform deployed for the National Library of Algeria, multiple universities (ENSA, ENSSMAL, Alger 1, UMMTO), and the Centre de Documentation Nationale (Tunisia).
- Built document capture, automatic indexing, metadata structuring, and full-text search workflows for these institutional deployments.

Electronic Payment Module - SATIM API Integration (2025)

- Python, Flask - designed and integrated a payment module connecting to the SATIM electronic payment API for secure online transaction processing, including request signing, validation, and error handling.

University Admission & Exam Management System (2023)

- Python, Flask, SQLAlchemy, AES, React.js - end-to-end exam platform: sheet generation, candidate anonymization, automated grading, AES-encrypted result publication for thousands of candidates nationwide.

EARLIER EXPERIENCE

AI Developer Intern

2021

Center for Development of Advanced Technologies (CDTA) - Algiers, Algeria

- Built a deep learning pipeline (CNN-3D, CNN-GRU) for human activity recognition, achieving 91% accuracy; reduced false positives by 15% through CNN fine-tuning.

EDUCATION

M.Sc. in Intelligent Computer Systems

2019 - 2021

University of Science and Technology Houari Boumediene (USTHB), Algiers - Thesis: Suspicious Activity Recognition using Deep Learning (CNN-3D, CNN-GRU)

B.Sc. in Information Systems and Software Engineering

2016 - 2019

University of Science and Technology Houari Boumediene (USTHB), Algiers

LANGUAGES

Arabic (Native) | French (Fluent) | English (Professional - B2)
